```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Compositions comprising these peptides may be used for treating a mammal for gonadorropin and gonadal steroid hormone associated dependent disease or for providing immunological contraception in mammals. They can also be used for treating breast cancer, uterine and other gynaecological cancers, endometriosis, uterine fibroids, prostate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    substantially reduce androgenic and/or non-androgenic steroids. The invention is used to produce food animals that exhibit the weight gain and muscle/fat distribution of male animals without the problems associated with male animals. Such problems include "boar taint", a urine-like odour found in cooked meat of uncastrated pigs which is caused by steroids stored in the tissues, and similar flavour impairments in the meat of other intact male animals. The invention is more reliable than prior art immunocastration techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        uncastrated male animals for meat production, one vaccination prior to or during the fattening period to reduce circulating testosterone levels, and the second vaccination about 2-8 weeks before slaughter to

Compositions comprising these peptides may be used for treating a mammal for gonadotropin and gonadal steroid hormone associated dependent disease or for providing immunological contraception in mammals. They can also be used for treating breast cancer, uterine and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequences given in R78282-85 represent immunomimetics to gonadotropin releasing hormone (GnRH). These peptides comprise the wild type GnRH sequence and a spacer attached to either the N- or C-terminal. The spacer molecules serve as a link through which the

    used for treating gonadotropin and gonadal steroid hormone
dependent disease(s) and providing contraception.

                                                                                                                                                                                                                                                                                                                                                                                                                                      Plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention

Ctreating allergies or arteriosclerosis. Incorporation of a promiscuous of treating allergies or arteriosclerosis. Incorporation of a promiscuous of improves capacity to induce a strong T helper cell-mediated immune carpiace carrier proteins and pathogen-derived T helper epitopes. Compose, resulting in production of antibodies against a target antigen. Composer vy1121 represents a promiscuous T helper epitopes represents a promiscuous T helper epitope from the cepitope. Sequence y91121 represents a promiscuous T helper epitope from the pathoges. Sequence y91143 represents a promiscuous T helper politope from the cepitope. Sequence y91143 represents a promiscuous T helper politope from the pathoge. Sequence y91144 are antigen. And sequences y91144-y91155 are compatitis B virus (HBV) surface antigen and sequences y91144-y91155 are compatitis B virus (HBV) surface antigen and sequences y91144-y91155 are compatitis B virus (HBV) surface antigen peptides comprising an LHRH candidate to a promiscuous The pitope. Y91197 is the LHRH target compatities and y91201-y91207 are antigenic peptides comprising compatities and y91201-y91207 are antigenic peptides comprising compatities and y91201-y91207 are antigenic peptides comprising compatities which may be used to prevent HIV infection of T cells. Y90212 is a modified version of a human IgE (immunoglobulin C cells. Y90212 is a modified version of a human IgE (immunoglobulin C peptides which may be used to prevent his peptide and a Th epitope. Y9123 target antigen. And Y9123-y9021 are this peptide and a Th epitope winch may be used in the treatment of allergies. Y91205 is a peptide derived from foot and mouth disease virus (FMDV) VPI capsid C peptides which may be used in the treatment of allergies. Y91208 and WPI Th epitope and may be used in a malaria vaccine. Y9128-y9123 target antigen and Th epitope winch may be used to prevent or treat arteriosclerosis and C c antigenic peptides. Y9123 and Y91251 and Y91257 are HIV-1 neutralising C antigenic peptides, and Y9128-y91251

breast cancer; endometriosis; boar taint; meat quality; immunocastration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatitis B virus surface antigen. The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone (LHRH). The synthetic Th epitope is derived from a structured synthetic antigen library (SSAL) designated SSAL2 Th SSAL2 Th is modelled after a promiscuous epitope taken from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Unidentified

New artificial T helper cell epitope and antigenic site, for immunization against or human immune deficiency virus Disclosure; Page 108; 129pp; English.

e.g. malaria,

CC response, resulting in production of antibodies against a target antigen. CC The can replace carrier proteins and pathogen derived T helper epitopes. CC Sequence Y91121 represents a promiscuous T helper epitope from the CC measles virus F (MVF) protein and sequences Y91122 Y91142, Y91226 and CC Y91245-Y91246 represent synthetic Th epitopes based on the MVF Th CC epitope. Sequence Y91143 represents a promiscuous Th epitope from CC hepatitis B virus (HBV) surface antigen, and sequences Y91144-Y91155 are CC synthetic epitopes derived from this HBV epitope. Y91166-Y91196, CC Y91227 and Y91242-Y91244 are antigenic peptides comprising an LHRH CC sequence joined to a promiscuous Th epitope. Y91197 is the LHRH target CC suntigenic peptide used in these LHRH antigenic peptides (Y91200) is CC somatostatin, and Y91201-Y91207 are antigenic peptides comprising CC somatostatin and a Th epitope. Y91208 is a human CD4 CDR2-like domain CC antigenic peptides which may be used to prevent HIV infection of TC cells. Y90212 is a modified version of a human IgE (immunoglobulin CC peptides which may be used in the treatment of allergies. Y91220 is constored and Y91207 or an antigenic peptides. Y91200 is a peptide derived from foot and mouth disease virus (FMDV) VP1 capsid CC apeptide derived from foot and mouth disease virus (FMDV) VP1 capsid CC apptides which may be used in the treatment of allergies. immunotherapy; for inhibition of the action of luteinising hormone releasing hormone (LHRH) for contraception, treatment of hormone-dependent cancer, prevention of boar taint in meat, and immunocastration); for promoting the growth of animals; or for treating allergies or arteriosclerosis. Incorporation of a promiscuous the first animals and a promiscuous treating allergies or arteriosclerosis. The invention relates to novel promiscuous T helper cell epitopes (Th) and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, protein and Y91221-Y91222 comprise this peptide and a Th epitope. is a Plasmodium falcibarum ofroumcorporate 'Co Th (functional protein (CETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of specifically against Plasmodium falciparum, cholesteryl ester transport Th (functional in genetically diverse subjects) into an immunogen improves capacity to induce a strong T helper cell-mediated immune infections (HIV, foot-and-mouth disease or malaria); for cancer **91**223

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Y91224-Y91225 comprise the CS antigen and an MVF Th epitope and may be used in a malaria vaccine. Y91228-Y91231 represent CETP-derived peptides and Y91232-Y91241 are immunogens comprising a CETP peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. Y91247 and Y91252-Y91257 are HIV-1 neutralising B-cell epitopes, and Y91248-Y91251 and Y91258-Y91273 are antigenic peptides comprising MVH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. Y91198 and Y91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chimeric -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC treating allergies or arteriosclerosis. Incorporation of a promiscuous CF Th (functional in genetically diverse subjects) into an immunogen improves capacity to induce a strong T helper cell-mediated immunogen comproves capacity to induce a strong T helper cell-mediated immunogen component in the production of antibodies against a target antigen. CF response, resulting in production of antibodies against a target antigen. CF response, replace carrier protein and sequences against a target antigen. CF replace carrier protein and sequences y91122-Y91142, y91226 and CF y91245-Y91246 represents a promiscuous T helper epitope from the ceptiope. Sequence Y91143 represents a promiscuous Theytope from the MVF Th CF y91245-Y91244 are antigen; peptides comprising an LHRH target CF sequence yoined to a promiscuous Theytope. Y91196, Y91272 and Y91242-Y91244 are antigen; peptides. Y91201 is comatostatin, and Y9120-Y91207 are antigenic peptides. Y91200 is somatostatin, and Y9120-Y91207 are antigenic peptides. Y91200 is comatostatin, and Y91209-Y90211 are MVH Theytope/CP4 CDR2 cantigenic site, and Y91209-Y90211 are MVH Theytope/CP4 CDR2 calls. Y90212 is a modified version of a human CP4 cDR2-like domain components and y90213-Y90212 are Theytope/CP4 CDR2 is a peptides which may be used in the treatment of allergies. Y91220 is a peptide derived from foot and mouth disease virus (FMV) VP1 capsid component in an anti-HD-1 was component or treatment of allergies and may be used in a malaria vaccine. Y91223 comprising a CEPP peptide and a Theytope and may be used in a malaria vaccine. Y91283 may 19128 and Y91287 are HTV-1 neutralising CP allergies, and Y91247 and Y91251 and Y91251 and Y91257 are antigenic peptides of the invention.

CC achieves, and Y91247 and y91251 and Y91258-Y91273 are antigenic peptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                  The present sequence represents a peptide immunogen comprising a synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone-releasing hormone (LHRH). The synthetic Th epitope is derived from a structured synthetic antigen library (SSAL) Thl. SSAL Thl is modelled after a promiscuous epitope taken from the F protein of the Measles virus. The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of
                                                                                                                                              functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat quality) and for immunocastration.
                                                                                                                                                                                                                                                                                                                                                                                                         New peptide immunogen containing luteinising hormone-releasing hormone antigen site and helper T cell epitope, for e.g. contraception and treatment of cancer -

                                                                    A synthetic DNA sequence (T37178) codes for a gonadotropin releasing hormone (GnRH) tetramer (W03944), in which the 4 GnRH repeat units are separated by spacers designed to increase immunogenicity. The DNA sequence was incoporated into vector pAA352 (ATCC 68283), which contains a truncated leukotoxin gene (LKT 352) derived from Pasteurella haemolytica, to give plasmid pCB113 (T37176). Escherichia coli transformants produce an LKT GnRH fusion protein (see also W03942 and W03943) useful as a vaccine for fertility control of domestic or farm animals.
                                                                                                                                                                                                                                 Gonadotropin-releasing hormone multimer fusion proteins - with leukotoxin polypeptide for increased immunogenicity, useful in antifertility vaccine prodn.
                                                                   Sequence

                                                                                                 멍
                                                                                                                                                                                                                                                                              vertebrates. This sequence, as compared to the native peptide, has been found to have an N-terminal Gln rather than a pyroGlu residue, and also contains substitutions at amino acid residues 15 and 41, whereby His is replaced by Asp. This produces an alternating multimeric GnRH sequence which is highly immunogenic that can be used in the construction of a chimeric protein that comprises a leukotoxin polypeptide, several multimers, and the GnRH sequence. The chimeric protein can be used as a
                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a recombinantly produced or chemically synthesised Gonadotropin releasing hormone-2 (GnHR-2) polypeptide, which contains four copies of the GnHR decapeptide (V61528) and triplet amino acid spacers between each of these sequences. This decapeptide is secreted naturally by the hypothalamus which controls release of both the luteinsing hormone (LH) and the follicle stimulating hormone (FSH) in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric protein of leukotoxin and gonadotropin releasing hormone useful for, e.g. preparation of vaccines for reduction of incidence of mammary tumours in mammals

This is used to exemplify the method of invention of immunisation against endogenous molecules by administering a vaccine which comprises an immunogen and a carrier to the ear of the mammal. The method is useful for eliciting an efficient and uniform immune response to block or suppress the activity of an endogenous hormone, hormone receptor, agonist or antagonist in a vaccinated subject, or to elicit an immune response against a targeted endogenous cell type (e.g. a cancerous or otherwise diseased cell). It is especially useful
                                                                                                                                                                                                                                                                                                                                        to reduce the levels of GnRH in domestic animals, especially in porcine or bovine species. The use of GnRH immunogens in the vaccine reduces the levels of luteinizing hormone and follicle stimulating dymone and helps in immunocastrating the animal. Administration of vaccine compositions to the ear instead of intramuscular administration into the neck increases the efficiency of vaccination of mammals against endogenous immunogens, and may increase uniformity of vaccine presentation since the ear is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunisation against endogenous molecules by administering vaccine to ear - useful to elicit efficient and uniform immune response to ear. gonadotrophin releasing hormone to immunocastrate pignations.

The invention relates to GnRH immunogens, analogues or antibodies that cross-react with endogenous GnRH of a vertebrate. A specifically claimed immunogenic fusion protein (Y58361) comprises, in the N to C-terminal direction, a synthetic peptide sequence (Y58364), an eight copy GnRH multimer (composed of two copies of the 4xGnRH multimer sequence of Y58363), the LKT protein (which functions as a carrier protein), and a second eight copy GnRH multimer. The fusion protein be used in a vaccine composition for prepubertal administration to a vertebrate subject to result in prolonged suppression of reproductive behaviour and/or fortility GnPH immunozone analogues.

                                                                                                                                                                                                                                                                                                                                               The vaccines are used to suppress reproductive behaviour and/or fertility for at least 10 months. The prepubertal administration results in a prolonged, long-term suppression of testicular development and/or function in males, or a prolonged, long-term suppression of ovarian development and/or function in females. The methods provide a viable and desirable alternative to surgical forms of sterilisation that

This sequence represents four copies of a gonadotropin releasing hormone (GnRH) analogue, DNA encoding which was used in the construction of a chimeric GnRH-leukotoxin (LKT) fusion gene (Z46400). This fusion gene encodes a GnRH-LKT fusion protein which may be used as a vaccine. The LKT portion of the protein acts to enhance the immunogenicity of the GnRH portion. The invention relates to a method of using two GnRH immunogen vaccines to produce uncastrated male animals for meat production, one vaccination prior to or during the fattening period to reduce circulating testosterone levels, and the second vaccination about 2-8 weeks before slaughter to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  substantially reduce androgenic and/or non-androgenic steroids. The invention is used to produce food animals that exhibit the weight gain and muscle/fat distribution of male animals without the problems associated with male animals. Such problems include "boar taint", a urine-like odour found in cooked meat of uncastrated pigs which is caused by steroids stored in the tissues, and similar flavour impairments in the meat of other intact male animals. The invention is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               non-androgenic; steroid; reduction; weight gain; muscle distribution; fat distribution; male pattern; boar taint; flavour; impairment; reliable; immunocastration; meat production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gonadotropin releasing hormone; GnRH; leukotoxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GnRH analogue multimer, containing four copies of the GnRH analogue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chimeric
Chimeric
                                                                                                                                                                                                                                                                                                                                                    sequence (see also W03944). It is the product of a chimeric gene (T37177) produced by deleting an approx. 1300 bp sequence from pCB113 (see also T37176) coding for amino acids 352-784 of LKT 352. Recombinant plasmid pCB111 (LKT 111:4 copy GnRH, ATCC 69748) was obtd. Escherichia coli transformants produced the chimeric protein, which is useful as a vaccine for fertility control, esp. immunological sterilisation of domestic or farm
                                                                                                                                                                                                                                                                                                                                                                                                                                 A chimeric protein (W03943) is composed of a fusion between a truncated leukotoxin (LKT-111) from Pasteurella haemolytica and a 4-copy gonadollberin-releasing hormone (GRH) repeat

This plasmid contains the LKT 111 polypeptide fused to four copies of the GnRH peptide. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The removal of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a leukotoxin polypeptide, several multimers, and a GnRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

They can also be used for treating breast cancer, uterine and other gynaecological cancers, endometriosis, uterine fibroids, prostate

                                                                                                                                                                                                                                                                                                                                           07-MAR-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gonadotropin releasing hormone (GnRH). These peptides comprise the wild type GnRH sequence and a spacer attached to either the N- or C-terminal. The spacer molecules serve as a link through which the immunomimic is attached to an immunological carrier such as diphtheria toxoid (DT) and also affects the immune response generated by the vaccinated mammal against the immunomimic. The invention relates to a method of using two GNRH immunogen vaccines to produce uncastrated male animals for meat production, one vaccination prior to or during the fattening period to reduce circulating testosterone levels, and the second vaccination about 2-8 weeks before slaughter to

These peptides comprise the wild type GnRH sequence and a spacer attached to either the N- or C-terminal. The spacer molecules serve as a link through which the immunomimic is attached to an immunological carrier such as diphtheria toxoid (DT) and also affects the immune response generated by the vaccinated mammal against the immunomimic. Compositions comprising these peptides may be used for treating a mammal for gonadotropin and gonadal steroid hormone associated dependent
